

U-BOLTS

FEATURES & BENEFITS

- » North American made by a leading global supplier
- » Grade 8 material - meets industry standards (SAE) and exceeds torque specs
- » Cold formed and machined for perfect fit and dimensional integrity
- » Rolled threads result in stronger tensile strength to extend product life

U-BOLTS

U-Bolts are a critical component of the leaf spring suspension system, clamping a leaf spring to the axle. Other required components include the top plate, axle seat, and bottom plate.

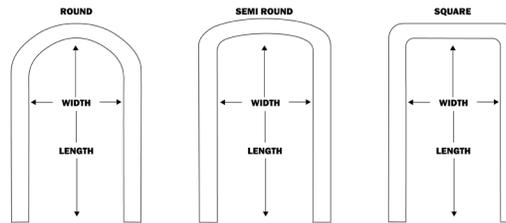

The TRP All-Makes suspension U-Bolt kits are manufactured in North America. U-Bolts come in various shapes such as round, semi-round, square, and flat styles. TRP U-Bolts are only sold in kits; including two bolts, four washers, and four nuts per box.

U-bolt varies from grade 5 to 8 strength materials. TRP's are only made with grade 8, which is 40% stronger than grade 5. You can count on TRP U-Bolts to always be strong enough to torque to spec.

The shape matching the mating surfaces must be perfect. If they are not, the pressure is not uniform, and the U-bolt can become loose over time. For this reason, TRP U-Bolts are only cold formed, and precision made on specialty machines. TRP U-Bolts will not have shape distortions and material issues from heat treatment processes like the competition.

MEASUREMENT

U-Bolts are measured by the diameter of the rod, distance between the two legs, and the leg length.

Make	Part Number	Description	Thread Size	Thread Length	Width	Length	Style	Application	Automann
